# On-board battery watering systems

On-board battery watering systems provide the most convenient and accurate means of filling and maintaining proper battery water level. Hard to reach batteries are just as easy to fill as batteries on a workbench.

Several batteries can be filled safely and simultaneously from a remote position without ever having to touch a battery or remove a cap. The automatic control valves ensure each cell is closed when the precise level is reached.

Reusable, kits can be reinstalled when similar new batteries are replaced.
